

Moisture Control, Productivity, and Clean Air

Productivity

The construction business is tough, and difficult winter conditions can make it even tougher. Ameritemp will help you get through the coldest of weather without missing a beat with our construction heater rentals. Our unrivaled service, state-of-the-art heating systems, and innovative design concepts will help keep your project on schedule and on budget. We provide you with a complete package to solve your construction heat needs, including safety, LEED, moisture control, even heating, energy savings, and clean air.

Moisture Control

Our dry heat systems benefit your project by controlling the moisture levels inside the construction building envelope. With a portable heater rental from Ameritemp, we can enhance the drying of concrete so it's prepared for the later step of installing wood or other specialty flooring. In other words, our processes remove the need for expensive drying techniques or encapsulation. We prevent condensation from forming inside to help deter mold, water damage, slips, and fall accidents. Dry heat also speeds up the drying process of drywall mud and paint to help your project stay on schedule.

Clean Air

Poor air quality is harmful to workers and other occupants. Common pollutants include carbon monoxide, nitrogen oxides, high levels of dust, and volatile organic compounds (VOCs). Our dry heat system pumps in fresh air while pushing other air out, improving air quality while simultaneously heating the building. The result is a safe, comfortably heated work environment.

Even Heating

Most traditional construction heating methods produce uneven heating of a space. When tradesman are moving heaters on a day-to-day basis, they are probably doing so to address uneven heating. Unfortunately, this is quite unsafe! Ameritemp controls the heat as well as air pressure within a space. This eliminates drafts, forcing heated air to move throughout the space and allowing for even, comprehensive heating.

Ready to deliver a high-quality, effective construction heater rental. Contact us today at by telephone at (815) 385-2350 or by email at Sales@ameritempltd.com to learn how we can solve your construction site temperature control problem and get you back on schedule.
